

BLACKROD CONNECTION PROJECT

Project Fact Sheet

The Blackrod Connection Project will provide liquids and natural gas transportation infrastructure to support International Petroleum Corp.'s (IPC) Blackrod Project. South Bow will develop and build the Blackrod Lateral liquids pipeline and associated facilities to connect production from IPC's proposed Blackrod Stream Assisted Gravity Drainage (SAGD) facility to the existing Grand Rapids Pipeline (GRP). South Bow will also construct and own the McMillan North natural gas pipeline supplying natural gas from the NOVA Gas Transmission Ltd. (NGTL) System to the IPC Blackrod facility.

Project scope - Pipelines

- ~25 km, 12-inch Blackrod Lateral liquids pipeline to connect Blackrod's crude oil production to our existing GRP System.
- ~25 km, 16-inch McMillan North natural gas pipeline to connect the Blackrod facility with the NGTL System.
- It is anticipated that the proposed liquids and natural gas pipelines will be constructed in an adjacent manner to minimize the overall footprint of the proposed project. The pipelines are currently proposed to be routed from section 25-76-18 W4M to section 6-76-15 W4M.

Project scope - Associated facilities

- The Blackrod Pump Station consisting of pumps and measurement equipment, located within the IPC Blackrod facility.
- The House River Terminal, consisting of a 150,000-barrel storage tank and auxiliary equipment, located near the tie point to the GRP System.

As planning progresses, details of the proposed project scope are subject to change based on engagement, engineering and survey activities.

Anticipated Blackrod Connection Project schedule

- Q3 2023 ----- Engagement completed
- Q2 2024 ----- Regulatory & environmental approvals
- Q3 2024 ----- Commence facility construction
- Q4 2024 ----- Commence pipeline construction
- 2026 ----- Anticipated in-service

Community benefits

Business and employment opportunities

Construction will create demand for local goods and services as well as the services of equipment operators, welders, mechanics, truck drivers, labourers and more.

Annual revenue to support local services

Project construction will result in tax payments to municipal, provincial and federal governments. When the project is operational, annual tax payments will help support schools and hospitals, emergency services, recreation facilities, recycling programs and other local programs vital to sustaining communities.

Investments in local communities

Through our engagement with local communities, we will identify areas where we can help build stronger, more vibrant communities through initiatives with community partnerships in the areas of safety, education, resilient communities and environment.

About South Bow

South Bow safely delivers 1.25 million barrels of crude oil every day through its pipeline infrastructure. Previously a part of TC Energy's liquid pipelines business, South Bow officially became a standalone company in 2024. Focusing on forging progress, the company has an unrivalled market position connecting Alberta crude oil supplies to U.S. refining markets in Illinois, Oklahoma and the U.S. Gulf Coast. We win as a team, take pride in what we do and are committed to minimizing our environmental impacts.
